Dear Employment Manager,

My name is Ryan Peach. I am an Electrical Engineer working at Nasco-NHK, a graduate of the WKU engineering program, and a MS Computer Science student specializing in Interactive Intelligence at Georgia Tech, which includes coursework in Robotics, Computer Vision, and Machine Learning. My most recent work experience includes maintaining and designing software and hardware systems for PLC controlled industrial machines, as well as research based employment working primarily on designing microprocessor and FPGA based PCB's and embedded systems, control and amplification circuitry for piezoelectric applications, machine learning algorithms for chemical detection and social media analytics, and software development for real-time hardware control of motors and lab-equipment via LabVIEW and MatLab programming environments. I have worked on the design of industrial, academic, government, and consumer electronics and software, and have received OSHA and LabView certifications. In my spare time I work on personal and open-source electronics/software projects, and work with education in my community by teaching robotics in summer camps at the middle school level, and volunteering with Big Brothers Big Sisters.

The development of new hardware and software is a passion of mine that I work with both on and off the job. I enjoy studies which focus on the creation and control of autonomous systems, especially those that navigate and work in the real world such as mobile robotics. I also enjoy simulation design as a means of better understanding and describing aspects of the world we live and work in. I believe in creating tools which make other's lives easier, or which expand the boundaries of a person's individual capabilities, and I often innovate these tools in my spare time. My passion for the electronics industry has lead me to pursue more demanding positions, and with my current educational path I hope to secure employment which allows me to be actively involved in research and development. I believe that my skills could make my involvement invaluable to your company, and I hope that you might consider my resume in future employment decisions. Thank you for your consideration. I look forward to our continued correspondence.

Sincerely,
Ryan Peach
